2. Scope 4
3. Responsibilities and Departments affected 4
4. Definitions and Acronyms 4
5. Procedure 5
5.1. Generalities 5
5.2. Creating a KPI 5
5.3. Indicator register 6
5.4. Data analysis 6
6. Distribution of Procedure 6
7. Annexes 6
8. Related documentation 7
9. Formation 7

1. Aim

Establish a procedure to define, collect, analyze and use key performance indicators (KPIs) that allow measuring the effectiveness and efficiency of software development processes at SPIKA TECH, hereinafter SPIKA.

2. Scope

This procedure is within the scope of the quality management system implemented at SPIKA.

3. Responsibilities and Departments Affected

The Quality Director, along with the Technical Manager, will make decisions regarding the results obtained from the process measurement analysis.

The affected departments are the following:

Department	Apply	
	Yeah	No
Address	☒	☐
Environment	☒	☐
Quality Assurance	☒	☐
Systems and Cybersecurity	☒	☐
Research and Development	☒	☐
Marketing and Sales	☒	☐
Management	☒	☐

4. Definitions and Acronyms

- KPI (Key Performance Indicator) : Key performance indicator used to measure the effectiveness of a process.
- SaMD (Software as a Medical Device) : Software intended to be used for medical purposes without being part of medical hardware.

5. Procedure

5.1. Generalities

KPIs should be defined in accordance with the organization's quality objectives and should be :

- Specific : Clear and well defined.
- Measurable : Quantifiable to allow monitoring.
- Achievable : Realistic and possible to achieve.
- Relevant : Directly related to quality objectives.
- Temporary : Defined in a specific time frame.

5.2. Creating a KPI

For the correct definition and implementation of a KPI, it is recommended to follow these steps:

- Process Identification : Determine the process you want to measure.
- Definition of the Objective : Establish what you want to achieve with the measurement.
- Indicator Selection : Choose a KPI that adequately reflects process performance.
- Establishing Measurement Methods : Determine how data will be collected and analyzed.
- Measurement Frequency : Define how regularly the KPI will be evaluated.

The definition of KPIs should be consistent with the term SMAT, as indicated here:

SMART: criteria for defining KPIs	
S (Specific)	Specific
M (Measurable)	Measurable
A (Achievable)	Achievable
R (Realistic)	Realists
T (Time -based)	Defined in time

5.3. Indicator registration

KPIs should be documented in a log that includes:

- KPI Name
- Description
- Calculation Formula
- Reference Value
- Measurement Frequency
- Responsible

5.4. Data analysis

The data collected must be analyzed to identify trends, deviations, and opportunities for improvement. This analysis must be documented and used to make informed decisions about process improvements.

6. Distribution of the Procedure

Staff members in the departments listed in Section 3 (Responsibilities and Affected Departments) must be provided with a copy of this procedure. In addition, controlled copy No. 1 will be submitted to the Archives for paper archiving.

Controlled copies to be issued:

Controlled Copy No.	Departments
1	Archive

7. Annexes

NO. / REV.	QUALIFICATION
N/A	N/A

8. Related documentation

Code	QUALIFICATION
MQ-01	Quality Manual
N/A	UNE EN ISO 13485 Medical Devices

9. Training

This version requires that the affected departments indicated in section 3 receive the training indicated below:

Mark with an X	Type of training
☒	Theoretical (reading and understanding of the procedure)
☐	Theoretical – Practical (If you select this option, contact the Responsible Technician)
