Registration of the list of approved suppliers. 18

1. Aim

The objective of this procedure is the procedure for the selection, evaluation, classification, approval and re-evaluation of suppliers that supply products or services that affect the quality of the medical device, ensuring their compliance with the requirements of the organization and the applicable regulations.

2. Scope

The scope of this procedure applies to all third-party providers that supply products or services used in the development, validation, maintenance, or support of the product developed by SPIKA.

3. Responsibilities and Departments Affected

The Technical Manager or the person to whom he/she delegates will approve or reject the evaluation of the suppliers and will safeguard all the information and documentation generated.

The affected departments are those indicated in the following table:

Department	Apply	
	Yeah	No
Address	☒	☐
Environment	☒	☐
Quality Assurance	☒	☐
Systems and Cybersecurity	☒	☐
Research and Development	☒	☐

Marketing and Sales	☒	☐
Management	☒	☐

4. Definitions and Acronyms

- Software : A set of instructions, programs, or applications designed to perform specific tasks within a computer system.
- Software vendor : An external entity responsible for providing software or software components that may be integrated, used, or required in the development, validation, or maintenance of products or services.
- Cloud computing : A technology service delivery model that enables remote access, via networks, to shared and configurable computing resources (such as storage, servers, databases, applications, and services).
- Cloud provider : An organization that offers cloud-based services (such as AWS, Microsoft Azure, Google Cloud).

5. Procedure

5.1. Introduction

Having approved suppliers is essential to meet customer, regulatory, and organizational requirements.

Furthermore, having approved suppliers prevents quality issues associated with the products or services supplied, as well as ensuring the search for alternative suppliers to ensure supply.

5.2. Selection

Anyone within the organization can propose new suppliers by completing a structured form. This form collects all the information necessary to evaluate the supplier's suitability, including the materials or services offered, associated risks, and selection criteria.

Suppliers with a direct supply chain and those with satisfactory prior experience will be prioritized. The Quality Department will be responsible for reviewing and validating the information received before proceeding with the formal supplier evaluation.

5.3. Supplier classification

Type of provider	Material
Critical	Supplier whose products or services directly affect the design, development, validation, maintenance, support or fulfillment of the product
Uncritical	Supplier that does not directly affect the characteristics or performance of the product
Not evaluable	Large technology companies or government agencies whose processes are not available for direct evaluation, but whose services are essential.

5.4. Initial evaluation

Critical suppliers are required:

- Mandatory documentation :
  - ISO 13485 (preferred) or ISO 9001 certification or other relevant certification (SOC 2, ISO 27001, etc.).
  - Signed quality agreement (Annex 1), NDA or documented acceptance of general conditions.
- Technical evaluation :
  - Assessment of the impact on the safety, integrity and performance of the medical device.

- Audit :
    - If feasible, a remote or in-person audit will be conducted.

If the supplier does not have a quality certificate :

- Its technical reliability will be assessed through tests, internal trials, references and experience.
- The justification for acceptance will be documented in Annex 2.

If the supplier does not accept audit :

- It will be documented as "Non-audited Supplier".
- Reinforced controls will be established , such as service validation, redundancy, and frequent integration tests .

Non-critical suppliers are required:

- Basic registration in Annex 2.
- Evaluation of previous history if you have already collaborated.
- No quality certificate or audit is required.

Non-evaluable suppliers must:

- Document in Annex 2 as “Not evaluable”.
- Attach general terms of service, security and privacy policies, and available public certifications (e.g., ISO 27001, SOC 2, CSA STAR, etc.).
- Compensatory internal control is applied:
    - Internal functional validations.
    - Continuous service monitoring.
    - Specific risk analysis.

5.5. Supplier approval

The Technical Manager or the person designated by him or her is responsible for issuing a decision on the approval or rejection of an evaluated supplier. This decision will be made after reviewing the documentation received from the supplier, signing and dating the approval or rejection. The supplier list will then be updated; a sample/template is included in Annex 3 .

A quality agreement template is proposed in Annex 1 , although agreements submitted by the supplier may be signed or modifications made to the one included in this procedure.

All generated documentation will be filed and safeguarded by the Responsible Technician.

5.6. Re-evaluation of suppliers

Provider Type	Initial Requirements	Re-evaluation	If you don't comply...
Critical	ISO 13485 / ISO 9001 / Technical evidence / Contract / Audit if applicable	Annual	Accepted if there is technical validation / reinforced control
Uncritical	Annex 2 complete / Informal review	Every 3 years	It can continue to be used if there is no impact on quality.
Not Evaluable	Public Evidence / Security Certificates / Terms of Service	Annual	Accepted if compensating internal controls exist

5.7. Audits

In cases where a supplier audit is required, the provisions of PNT-013 Audits: Internal and External will be followed.

5.8. Documentation file

Documentation of supplier evaluation and approval (completed forms, submitted documentation, audit reports, follow-up reports, annual audit plan, etc.) will be kept in the files of the QA/RA department, as established in procedure PNT-001 Document Management and Archiving .

6. Distribution of the Procedure

Staff members in the departments listed in Section 3 (Responsibilities and Affected Departments) must be provided with a copy of this procedure. In addition, controlled copy No. 1 will be submitted to the Archives for paper archiving.

Controlled copies to be issued:

Controlled Copy No.	Departments
1	Archive

7. Annexes

NO. / REV.	QUALIFICATION
1/01	Quality agreement template
2/01	Supplier approval/rejection record
3/01	List of suppliers

8. Related documentation

Code	QUALIFICATION
N/A	Regulation (EU) 2017/745 of the European Parliament and of the Council on medical devices, amending Directive 2001/83/EC, Regulation (EC) No 178/2002
MQ-01	Quality Manual
PNT-001	Document and archive management
PNT-013	Audits: internal and external

9. Training

This version requires that the affected departments indicated in section 3 receive the following training:

Mark with an X	Type of training
☒	**Theoretical** (reading and understanding of the procedure)
☐	**Theoretical – Practical** (If you select this option, contact the Responsible Technician)

Annex 1_VERSION_0 2

Quality Agreement Template

QUALITY AGREEMENT

This quality agreement as of (INDICATE DATE) is between the following parties:

Spika Tech, hereinafter SPIKA, as a company registered in INIDICAR DIRECCION , Spain with CIF: INDICAR , represented by INIDICAR ADMINISTRADOR, acting as **Buyer** in this agreement.

and

(INDICATE COMPANY NAME), as a company registered in (INDICATE LOCATION; Exact address) with CIF (INDICATE No.) , represented by (INDICATE REPRESENTATIVE), acting as **Supplier** in this agreement.

- The buyer is a company dedicated to the manufacture of medical devices.
- The supplier is a company dedicated to (INDICATE ACTIVITY).
- The buyer intends to purchase the products from the supplier identified in **Annex 1** of this agreement.
- Both parties decide to draft this agreement to define the roles and responsibilities of each in relation to the quality of the products supplied.

DEFINITIONS:

- Product: This is understood as the good supplied by the supplier and that the buyer intends to acquire, understood as physical products or goods or services.

SCOPE:

1. This quality agreement covers all aspects of quality related to the manufacturing, packaging, distribution, and storage of products, and establishes and defines the obligations and responsibilities of both parties in relation to the quality standard required for the products to be supplied by the supplier.
2. This agreement is not intended to define legal or commercial relationships .

Article 1: Certificate of Analysis or Certificate of Conformity

1. The buyer is required to have a certificate of analysis for the products to be purchased.
2. The certificate of analysis must be provided with each delivery of material, if required by the type of product to be supplied.
3. The certificate of analysis must contain at least the following information:
    a. Name and exact address of the supplier. If the supplier and manufacturer are different, provide the manufacturer's exact address.
    b. Product name
    c. Product batch number
    d. Reference to specifications
    e. Tests carried out in accordance with applicable regulations
    f. Release date and signature of qualified personnel
    g. In Spanish or English.

Article 2: Exchange Control

1. The supplier must have a change control system in place.
2. The supplier must inform the buyer of any changes made to the product, especially those that impact the quality of the supplied product, so that the buyer can analyze their impact .
3. The implementation of major changes must have the buyer's approval before being executed.
4. The supplier will provide the material in compliance with applicable standards and regulations and will provide the necessary documentation of those changes to meet the requirements of health regulatory agencies, if applicable.
5. The supplier shall notify and inform the buyer within a reasonable period of time.

Article 3: Audits

1. The supplier is open to on-site audits and/or postal/documentary/remote audits. The supplier must allow access to the buyer's premises, as well as the required documentation, without interfering with ongoing operations .
2. The results of the audits and observations will be submitted by the buyer in writing. The supplier will ensure follow-up and implementation of any required corrective measures.
3. The frequency of audits will depend on the results of the audits and the quality of the supplier. If there are no critical nonconformities regarding product quality, the frequency will not be more than every three years.

Article 4. Retention samples

1. The supplier will keep sufficient retention samples to repeat analysis at least twice against specifications.

Article 5: Documentation

1. The supplier will store the production documentation and all original documentation related to the product, which will be protected and with controlled access.
2. The original documentation is accessible in the event that the buyer attends the facilities for an audit.

Article 6. Claims/Complaints

1. The supplier will respond to complaints submitted by the buyer within a period of no more than 20 business days. In the case of serious complaints, the maximum response time will be 5 days, in order to deliver a written preliminary report and a final report within 10 days.
2. In the event of non-compliance with the indicated deadlines, the supplier may provide interim reports to the buyer.
3. The supplier will inform the buyer if it receives serious complaints with a high impact on the products supplied to the buyer.

Article 7. Withdrawal

1. In the event of a recall by the supplier, the buyer will be immediately informed of the quality defects.
2. In the event of a recall, the buyer and supplier will agree on and decide on roles and responsibilities, as well as the coordination of the investigation.
3. The buyer is the one who will make the final decision on the finished product based on scientific criteria and risk management.

Article 8: Raw materials

1. The supplier is responsible for purchasing, storing, analyzing, and disposing of raw materials, as well as ensuring that each one meets current requirements.

Article 9. Deviations

1. In the event of serious quality-related incidents detected after shipment to the buyer, the supplier must inform the buyer as soon as possible.

Article 10. Packaging and labeling.

1. Appearance: The labeling of the product supplied by the supplier must be identifiable, located in a visible location and in adequate dimensions for human reading.
2. Contents: The product must be labeled with the product description, product name, batch number , supplier name, and quantity.

Article 11. Regulatory documentation

1. The supplier will be responsible for preparing the regulatory documentation required by the buyer and keeping it updated according to requirements.

Article 12. Product release

1. The supplier will not deliver the product to the buyer until it has been released by the supplier. Quarantined shipments may be accepted with prior authorization from the buyer.

Article 13. Specifications

1. The supplier will release the product according to the specifications and tests agreed upon by both parties, buyer and supplier.

Article 14. Confidentiality

1. The Supplier and the Buyer understand that any information of a confidential nature provided by either party must be treated in strict confidence.

With all this, the parties agree to the provisions set forth herein on two original copies as of the date indicated by the undersigned:
