1. Aim

Establish the use of electronic signatures linked to user accounts in SPIKA's digital management system, ensuring the traceability, authenticity, and integrity of the actions performed in the Quality Management System (QMS), in accordance with ISO 13485 and Regulation (EU) 2017/745.

2. Scope

Applies to all personnel involved in documented activities within the SGC through the authorized digital platform.

2.1. Responsibilities and Departments Affected

3. Definitions and Acronyms

- Digital signature : Signature electronically linked to a person, with legal validity and verifiable authenticity.

- Digital registry : System that collects, stores and protects staff signature data.
- SGC : SPIKA Quality Management System.

4. Procedure

The system used by SPIKA allows the user who accesses and performs actions in the environment to be uniquely and unambiguously identified through their electronic signature. If this electronic signature does not include the date on which it was issued, it will be necessary to add it before signing the document.

4.1. Use of digital signature

In official SGC documents (procedures, instructions, records, etc.), digital mechanisms must be used that allow:

- Uniquely identify the signer (username and password, biometric signature, digital certificate, etc.).
- Record the date and time.
- Maintain traceability (through logs or document system).

Signatures can be integrated by:

- Digital signature platforms
- Sign with digital certificate
- Internal access control system with traceability

.

5. Distribution of the Procedure

Staff members in the departments listed in Section 3 (Responsibilities and Affected Departments) must be provided with a copy of this procedure. In addition, controlled copy No. 1 will be submitted to the Archives for paper archiving.

Controlled copies to be issued:
